Connecting businesses to ultrafast connectivity

The business world is evolving. Technology is at the heart of this evolution and the driving force is gigabit capable, full fibre connectivity.

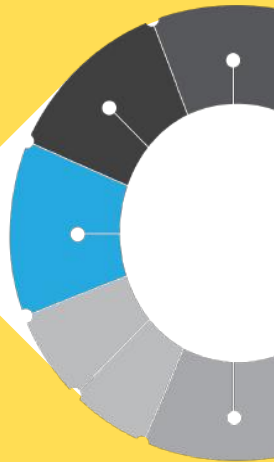

As the Government promises 100% Gigabit capability by 2025, we are playing a key role in this vision with the rollout of our Faster Britain network across the UK.

A Faster Britain-enabled area will provide full fibre and access to ultrafast connectivity, supporting cloud-enabled and future proof technologies.

Our team has nearly two decades of experience in the design, delivery and operation of connectivity solutions, and now we're working with Preston businesses, providing access to heightened speeds.

Why ITS?

- **Network:** We are designing, building and operating ultrafast networks, driven by partner and business requirements.
- **Experts:** We have some of the best minds in the industry cooperating, innovating and bringing fibre to under-served areas across the UK.
- **Collaborate:** We work with businesses, local authorities and partners to extend our Faster Britain network by utilising existing infrastructure.
- **Speed:** We have a track record of connecting businesses to our networks in a fraction of the time it takes our competitors.
- **Environment:** Nobody likes disruption, that's why we minimize our impact on the environment and lead on reuse wherever possible.
